## DETAILED ACTION

### *Drawings*

1. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

### *Double Patenting*

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 1-6 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-3 and 6 of copending Application No. 09/960,714. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

### *Allowable Subject Matter*

4. Claims 7-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:  
The prior art of record, taken alone or in combination, fail to teach or fairly suggest a method for providing one or more secure transactions between a first entity and at least one additional entity, comprising the steps of using an electronic card to generate a secure card number wherein the secure card number is comprised of, among other things, an encrypted PIN Block, wherein the encrypted PIN Block is formed by using a Triple Data Encryption Standard algorithm (TDES) to encrypt a PIN Block; and wherein the PIN Block is generated from a PIN associated with the first entity, a Sequence Insertion Number and a starting value known to both the first entity and to the money source.

*Conclusion*

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wong (US 6,607,127) discloses an electronic device used in the processing of financial and security smart card transactions using the existing magnetic card storage medium processing infrastructure; and Fak et al (US 4,214,230) discloses a personal identification system.
